Volt

A STRONG MUNICH WITHIN A STRONG EUROPE

Europe starts locally – in cities, municipalities and neighbourhoods. These are the places where we decide how to tackle the big challenges of our time. Especially the climate crisis, the increasing social inequalities, threats to our democracy through authoritarian movements, how to handle global migration, the demographic change and the digital and economic transformation. As a pan-European party we are convinced that these challenges need to be solved internationally, on the European level. They need a new way of thinking in politics: connected, forward-facing and across borders. That is why we founded Volt. A political movement which is active in 32 countries within Europe, to find practical solutions for our continent. Starting locally, in municipalities and cities.

For Munich we envision a city that belongs to everyone. A city that is economically strong, socially just, ecologically responsible and digitally ready for the future. Our policies are neither idealistic nor technocratic, it is oriented towards a bright future, pragmatic and based on facts. We want to ask what is helpful? And what will truly bring Munich forward?

Volt stands for progressive politics: based on solutions, including the European view and being responsible. We want to achieve a city in which innovation and community can go hand in hand through which it will become the most liveable city in Europe. For a Munich, where traditions and changes are a powerful alliance to design our future together. A city which will be a role model for all of Europe.

A city, where living is no longer a luxury but a basic human right for all. A city, where rent stays affordable because we build housing fast, sustainably and socially just. The entire city will be a big park-like space with colorful and mixed neighbourhoods, that make room for lively quarters and give space to everyone. Supermarkets, playgrounds, schools, kindergartens, doctors, pharmacies, restaurants, cafés and bars but also all other community spaces are reachable within 15 minutes for everyone, embedded within nature and recreational spaces which aid our health and make Munich more liveable. Single-use cups and plates will no longer be used, instead there will be a comprehensive and uniform multi-use system for To-Go products – a big circular system within the whole city. All buildings will carry solar cells and together with geothermal energy will stabilise energy prices for everyone, which will be unaffected by the global energy market. District cooling replaces loud and inefficient air conditioning systems and cools the city on hot days - with significantly easier technology in buildings.

A city which simplifies our life. In which we can manage everything in the Munich App. From appointments with the administration offices and tickets for the public transport to citizen participation for projects.

A city, where mobility is fun. With a holistic cycling system and pedestrian zones, which are hugged by trees and accompanied by drinking fountains. With fresh and clean air because the car traffic is electric only – with more and more →

→ self driving taxis. And with an efficient and accessible public transport, that invites people to change their way of travel.

A Munich, that bravely looks towards the future. With innovation-centres that encourage new ideas and attract investors to create jobs sustainably. In which necessary workers from abroad can get working visas easy and fast to start working in local businesses. And with a true and lived democracy, in which residents can decide themselves how to improve their neighbourhood. A city, which leaves no one

behind because child care is accessible to all families, the city administration is inclusive and accessible, and where the social communities are celebrated.

With big developments like in 'Neu-Freiham' and the 'Münchner Norden' we have unique chances to embed these concepts holistically and from the beginning. These projects will be flagship projects for Munich and inspirations for all of Europe.

All this is not a dream. It is our plan – a plan which we base on our six Guiding Principles and six Focus Areas:

Our Guiding Principles

European Thinking & Action

Social Equality

Factual & Pragmatic Politics

Business-Friendly City

Environment & Climate Protection

Smart City – Simple & Digital

Our Focus Areas

Housing & Urban Development

Work & Economy

Education & Childcare

Mobility

Culture & Community Life

Lived Democracy

THE GUIDING PRINCIPLES OF OUR POLITICAL WORK

European Thinking & Action

Munich is not only a city. It is politically, economically and culturally embedded in Europe. Based on this, Volt approaches politics from the European angle: cooperative, solidarily and geared towards long-term solutions. Topics like the climate crisis, skilled labour migration or managing migration: Many local challenges need a sound European framework. On the other hand, many issues were addressed successfully in other European cities, which can be adapted in Munich. This is why we advocate for a stronger European cooperation, implementing European standards and a stronger municipal voice within Europe. For us, to think European means taking local responsibility while acting in a globally connected framework.

For us, this means specifically:

Measure	Focus Area	Page
Using proven European models as guidance for Munich’s urban planning	Housing & Urban Development	20
Shaping Munich’s mobility turnaround based on successful European cities	Mobility	29
Understanding international skilled labour immigration as a European opportunity	Work & Economy	33
Applying successful educational concepts from across Europe in Munich	Education & Childcare	48
Making Europe tangible in every neighbourhood through EU action weeks and school projects	Lived Democracy	57
Actively integrating Munich into European city networks	Lived Democracy	57

You can find details on the relevant pages in the complete German election programme.

A Business-Friendly City

Munich’s economic success is not a given – it relies on a diverse entrepreneurial ecosystem and a well-qualified workforce. The taxes paid by local businesses fund a large share of public services from childcare and public transport to cultural offerings, climate action and more. Volt therefore supports a business-friendly environment that fosters innovation, attracts talent and creates fair job opportunities. We particularly aim to strengthen small and medium-sized companies, craftsmen and start-ups. Our goal is the “Münchner Mischung”: a city that holds space for diverse industries, business sizes and ideas – innovative, sustainable and socially responsible.

For us, this means specifically:

Measure	Focus Area	Page
Positioning Munich as a European pilot city for autonomous driving	Mobility	28
Actively facilitating the immigration of international skilled workers	Work & Economy	33
Creating a strong ecosystem for founders and start-ups	Work & Economy	35
Securing sufficient commercial spaces for crafts, retail and industry	Work & Economy	35
Strengthening the innovation hub by linking research and industry in a targeted manner	Work & Economy	35
Establishing a service-oriented digital administration as a real competitive advantage	Lived Democracy	54

You can find details on the relevant pages in the complete German election programme.

Social Equality

We strive for a Munich in which everyone has equal opportunities. Affordable housing, good education, fair access to the labour market and to social, cultural and health services are the foundation for participation. Because a city where everyone can co-shape their environment is stronger, fairer and more liveable. Volt aims to promote social justice through accessible structures, individual support and an administration that builds bridges instead of barriers. Participation is not a luxury – it is the foundation of a vibrant and inclusive democracy.

For us, this means specifically:

Measure	Focus Area	Page
Accelerating the construction of affordable housing and ensuring social fairness	Housing & Urban Development	20
Enabling participation through a fully accessible and affordable public transport system	Mobility	27
Supporting fair wages, good working conditions and entrepreneurship	Work & Economy	35
Promoting accessible, diverse and community-oriented cultural offerings	Culture & Community Life	39
Promoting equal opportunities through expanding childcare and all-day education	Education & Childcare	46
Creating an inclusive and barrier-free administration for all residents	Lived Democracy	56

You can find details on the relevant pages in the complete German election programme.

Environment & Climate Protection

The climate crisis is the defining challenge of this century, also on the local level. It demands determined action to protect the basis of a healthy life and to ensure a climate resilient city. Volt views climate protection not as a limitation but as an opportunity for progress: with an innovative economy, secure jobs, cleaner air, more greenery, reduced heat stress and resilient infrastructure. Our city can be a role model if we set clear climate targets, transform mobility, and build sustainably. Good urban planning must always consider the changing demands caused by climate change. A resilient city protects its people, its nature and retains its capacity to act.

For us, this means specifically:

Measure	Focus Area	Page
Advancing the mobility transition through expanded cycling and pedestrian infrastructure	Mobility	20
Establishing circular economy practices in the building sector	Housing & Urban Development	23
Adapting the city to the challenges of climate change through de-sealing and urban greenery	Housing & Urban Development	24
Expanding sustainable energy supply through geothermal and solar energy	Housing & Urban Development	25
Reducing individual motorized transport and strengthening public transport	Mobility	27
Making Munich a pioneer in green technologies and sustainable business models	Work & Economy	35

You can find details on the relevant pages in the complete German election programme.

Factual & Pragmatic Politics

Volt focuses on policies that work – not ones that merely sound good. Our decisions rely on scientific evidence, proven models and transparent evaluation. We assess whether measures are effective – and adapt them when they are not, because ideological blind spots hinder addressing complex challenges. Instead, we look for the best solutions, including abroad: many European cities already show what works. Our goals are pragmatic, solution-oriented politics that measurably improves people’s lives. This requires transparency, reliability and the courage to rethink or adjust when necessary. Credibility is earned through results, not slogans.

For us, this means specifically:

Measure	Focus Area	Page
Applying proven models such as the “Hamburg Standard” to reduce construction costs	Housing & Urban Development	20
Testing innovation in “regulatory sandboxes” without added risk	Work & Economy	35
Creating added value for stakeholders through innovative procurement	Work & Economy	36
Implementing an open-data strategy to foster new solutions for the city and the private sector	Work & Economy	37
Using successful educational models from across Europe in Munich	Education & Childcare	48
Implementing citizen assemblies as pilot projects accompanied by scientific evaluation	Lived Democracy	53

You can find details on the relevant pages in the complete German election programme.

Smart City – Simple and Digital

A modern city’s job is to make everyday life easier, not more complicated. Volt demands a public administration which is digital, accessible and service-oriented. Residents should be able to handle administrative matters online, businesses should receive timely responses, and public data should be used sensibly. At the same time, we safeguard the right to communicate with the administration in person, ensuring that everyone can participate. Efficiency gains from digitalization will be reinvested, including to support people who are less familiar with digital services. We invest in modern infrastructure: from energy planning to traffic management, from educational technology to urban development. The city of the future is connected and functions digitally, openly and centred on people.

For us, this means specifically:

Measure	Focus Area	Page
Building a comprehensive and intelligent charging infrastructure	Mobility	28
Managing traffic more efficiently through digital and intelligent traffic systems	Mobility	31
Implementing an open-data strategy for transparency and innovation	Work & Economy	37
Expanding the “München App” into a digital key for all areas of life	Culture & Community Life	42
Strengthening digital education and media literacy in all schools	Education & Childcare	48
Developing a resident-friendly, digital administration as a central service	Lived Democracy	54

You can find details on the relevant pages in the complete German election programme.

OUR CANDIDATES

Felix Sproll

„Our liveable and economically strong Munich must become affordable for everyone.“

As a member of Munich's city council, Felix combines political experience and economic expertise. He stands for a strong economy in a Munich that leaves no one behind – with genuine public participation and affordable housing for everyone.

Carina Bachner

“Education requires equal opportunities – regardless of origin or income.”

Carina adds medical precision and scientific practice to politics. She is committed to a Munich that better supports families and children – because fair educational opportunities for everyone are also the foundation for the skilled workforce of tomorrow.

Michael von Stosch

“A vibrant cultural scene and strong craftsmanship are the pulse of our city.”

Michael is a self-employed craft designer and deeply rooted in Munich's cultural scene. He advocates for a city that comes alive and thrives again – with space for culture, craftsmanship and creative ideas that make Munich a vibrant and liveable place for everyone.

Alexandra Lang

“Modern mobility provides more freedom than just the car.”

Alexandra is a transport planner who knows the challenges first-hand. She fights for a real mobility turnaround. One in which cycling, public transport and cars are considered jointly as part of the urban development – for a liveable and climate-friendly Munich.

Philipp Eisenmann

“A climate-resilient city starts with local transformation – and circular thinking.”

Philipp brings international experience in environmental, water and recycling management to Munich's local politics. He understands both municipal and economic perspectives and knows how to bring stakeholders together to make cities sustainable and future-proof.

Katharina Brinck

“Participation makes democracy strong – and our city future-ready.”

Katharina adds systemic thinking, international experience and political dedication to local politics. She fights for meaningful participation, political education and a democratic renewal – so that we can truly shape the future of Munich together.

KEY FOCUS AREAS OF OUR MUNICH POLICIES

What should Munich look like in ten, twenty or fifty years? This question guides our political work. In this programme, we show how we will tackle the city's major challenges – from housing to mobility, education, the economy and culture.

It is not just about visions, but about feasible solutions. We identify the challenges, define clear goals and propose concrete measures that will make our city more equitable, more sustainable and more European. From the outset, we also consider how our proposals can be funded and make specific recommendations.

Housing & Urban Development

„Affordable, sustainable, liveable –

this is how we build the Munich of tomorrow.“

Volt advocates for affordable housing and liveable, climate-resilient neighbourhoods because housing is a social right. Our urban development approach combines social justice with sustainability and climate protection – for a Munich that remains liveable for everyone in the future.

Our measures include:

★ **More Housing – Building Faster, Smart Densification, Steering Equitably**

Page 20

Volt accelerates construction of housing by using faster and digital planning processes as well as cost-saving models such as the “Hamburg Standard.” Through consistent social land-use policies (SoBoN) with up to 60% social housing, stronger support for housing cooperatives and well-planned densification, we create urgently needed affordable homes. This ensures social cohesion across all districts.

★ **Secure Fair Rent**

Page 22

Volt protects tenants effectively against displacement. Municipal land will only be leased under long-term hereditary building rights to developers who guarantee permanently affordable rent. With strict enforcement against misuse of housing and a new mediation office for rental conflicts, we create more transparency and fairness in Munich’s tense housing market.

★ **Circular Construction – Saving Resources, Protecting the Climate, Shaping the Future**

Page 23

Volt establishes the circular economy as a new standard in Munich’s construction sector. Binding requirements for reusable materials, digital material passports and support for pilot projects reduce waste and CO₂ emissions. A municipal depot for reusable materials will make Munich a pioneer for sustainable and resource-efficient construction.

★ **Climate-Resilient Living – Today and Tomorrow**

Page 24

Volt prepares Munich for the climate crisis. A major programme to unseal surfaces and building urban greenery on roofs, façades and public squares creates a “natural air conditioning system” for the city. More drinking fountains, shaded “cooling oases” and small green spaces protect public health and increase quality of life, especially on hot days.

★ **Clean Energy, Stable Prices – For a Fair and Sustainable Energy System**

Page 25

Volt strengthens the Stadtwerke München (SWM) as a public provider of renewable energy to ensure long-term price stability and independence from global energy markets. Profits are reinvested directly into local renewable energy expansion and social tariffs so that the energy transition benefits everyone.

You can find details on the relevant pages in the full german election programme.

Mobility

„A city for people, not for traffic jams –

climate-friendly and safe en route.“

Volt is building a modern, safe and climate-friendly mobility system that prioritizes public transport, cycling and walking – for fewer traffic jams, cleaner air and a city designed for people. We draw on the best practices from Europe.

Our measures include:

★ **An Accessible, High-Performance Public Transport System**

Page 27

Volt is expanding Munich's public transport (bus, tram, U-Bahn and S-Bahn) into a powerful and inclusive alternative to private cars for the future. Through improved frequency and quality and with expanded U-Bahn and tram lines and new express bus routes, we strengthen connectivity across the entire city. All public transport will become fully accessible, so everyone can participate in the city's mobility.

★ **Quiet and Clean: E-Mobility, Autonomous Vehicles and a Car-Free Old Town**

Page 28

Munich should become quieter, cleaner and more liveable: through a gradual transition to a car-reduced historic city centre, more space for pedestrians and cyclists and attractive public spaces. We promote car-sharing, e-mobility and smart traffic management while creating conditions for autonomous vehicles to operate in Munich. Future autonomous car-sharing and other alternatives to private cars will reduce traffic, improve air quality and transform the city centre into a vibrant space for community life.

★ **Safe on the Move – Munich as a Cycling City**

Page 29

Volt turns Munich into a genuine cycling city by fully implementing the city's cycling referendum. We create a continuous, safe network of cycling routes with wide, physically separated lanes and safe intersections, inspired by leading European cities. More secure bike parking and green corridors along cycling routes make cycling the most attractive and safest mode of transport for people of all ages.

★ **Walking Through Munich – Safe, Green and Accessible**

Page 30

We strengthen pedestrian mobility with wider, safer, pavements that are without physical barriers and are kept free from parked cars. More greenery, seating and better lighting create inviting neighbourhood spaces with high quality of stay. In close cooperation with local residents, we redesign public spaces so that everyone feels welcome and safe when walking through their neighbourhood.

★ **A City of Short Distances**

Page 31

Volt develops Munich into a city of short distances, where all essential daily services are reachable within 15 minutes by foot or bike. New neighbourhoods are planned according to this principle from the outset, while existing ones are improved through targeted densification. This strengthens quality of life, local communities and reduces unnecessary traffic.

You can find details on the relevant pages in the full German election programme.

Work & Economy

**„Munich: Europe’s No. 1 Economic Hub –
sustainable and ready for the future.“**

Volt strengthens Munich’s role as a European centre of innovation by closely linking science, business and urban development. Our goal: creating new jobs which are fair, climate-friendly and future-oriented that combine prosperity, sustainability and social cohesion.

Our measures include:

★ **Attracting Skilled Workers, Cutting Red Tape – with a Digital Administration**

Page 33

We make Munich more attractive to international skilled workers by removing bureaucratic barriers. With more staff in the immigration office, a digital “fast lane” for qualified workers and designated contact personnel for companies, we significantly accelerate administrative procedures. A modern, service-oriented administration becomes a decisive competitive advantage in the race for the best talent.

★ **Munich’s Continuing Education Network – Digitally Equipped for the Future**

Page 34

Volt addresses the shortage of skilled workers through a digital and central network for professional development and education. This platform connects all relevant providers and makes their programs easy to find and accessible for residents. A special focus is on expanding the courses for digital skills, ensuring that Munich’s people are prepared for the world of tomorrow.

★ **Munich as a Hub for Business & Innovation**

Page 35

Volt strengthens the link between cutting-edge research and entrepreneurship to secure Munich’s innovative power. The municipal start-up office will be expanded and will connect start-ups with established companies, acting as “business angels.” We create sufficient affordable commercial space for crafts, retail and industry. By introducing regulatory sandboxes, we establish protected testing environments where new technologies can be trialled safely and developed to market readiness.

★ **Creating Value Together – New Procurement Models**

Page 36

Volt introduces new procurement and contracting models to deliver large municipal projects faster, more sustainably and more cost-effectively – from energy-efficient housing to multi-use mobility hubs and smart-city infrastructure. Public and private partners combine financing, expertise and innovation to create true added value for the city and its residents. At the same time, we ensure that local small and medium-sized businesses are fairly included.

★ **Open Data for Innovation, Transparency and New Business Models**

Page 37

Volt transforms Munich into a genuine open-data city. We expand the municipal data portal and make high-quality, machine-readable data from administration, mobility and urban planning publicly available. This fosters transparency and enables companies, start-ups and researchers to develop innovative services and new business models for the public.

You can find details on the relevant pages in the full german election programme.

Culture & Community Life

**“Fostering diversity and creating spaces –
for a vibrant city.”**

Volt strengthens cultural diversity, secures public spaces and makes culture, nightlife and community offerings accessible to everyone as the foundation of a vibrant, inspiring and inclusive Munich. A diverse city needs places for encounters, expression and participation.

Our measures include:

★ Culture for All – Diverse, Accessible, Community-Based

Page 39

Volt brings culture directly into the neighbourhoods and into everyday life. By supporting street festivals, pop-up culture and the independent culture scene through low-bureaucracy funding, we create lively communities. Public spaces such as the Olympiapark become year-round community culture venues. Through a cultural sponsorship model and more performance spaces, we strengthen civic engagement and the diversity of Munich's cultural scene.

★ Spaces for Diversity – Queer Life and Subculture

Page 40

Volt advocates for a city where queer life and subculture are visible, safe and well supported. With targeted cultural funding, the creation of safe spaces and the structural anchoring of queer perspectives in administration and education, we reduce discrimination. Visibility of queer history in the urban landscape and gender-sensitive language in all municipal departments strengthens diversity and makes Munich a truly welcoming city.

★ Safety Instead of Stigma – Modernising the Approach to Substance Use

Page 41

Volt focuses on prevention, decriminalisation and dignified access to support services rather than taboos and repression. Through early education, safe consumption and counselling spaces, strengthened school social work and targeted information campaigns, we minimize risks, increase resilience and improve public safety.

★ A Digital City in Everyday Life – with the München App as the Key

Page 42

We develop the München App into the central digital access point for city life. All municipal services – from administration to culture and mobility – are bundled there in an easy, safe and low-barrier way. Residents can book appointments, buy tickets and submit applications. This strengthens not only administrative efficiency but also transparency and digital participation for everyone.

★ Protecting Nightlife – Introducing Temporary ‘Culture Zones’

Page 43

Volt protects and supports Munich's nightlife as an essential part of urban culture. By creating temporarily designated “culture zones” in selected streets, we provide reliable free spaces for gastronomy and events. A designated night mayor acts as a central mediator between nightlife venues, residents and the administration, proactively resolving conflicts.

★ Less Waste, More Reuse – Munich Ends Single-Use Packaging

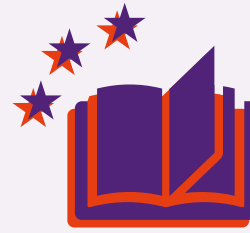

Page 44

We eliminate single-use packaging for ready-to-eat products in the city by 2027. Through a central tender for a mandatory city-wide reusable pool system, we create an easy and affordable standard for all businesses. This reduces millions of disposable items each year, cuts cleaning costs and makes Munich a pioneer for sustainable consumption.

You can find details on the relevant pages in the full german election programme.

Education & Childcare

**„Good education needs strong structures –
to establish true opportunities from the start.“**

We invest in early childhood care, modern schools and targeted support because education is the key to participation from day one. With an intelligent, equitable and future-oriented education landscape, we lay the foundation for a strong and cohesive Munich.

Our measures include:

★ **Expanding Crèche, Kindergarten and All-Day School Places**

Page 46

Volt wants every child in Munich to have equal opportunities from the very beginning. We create the necessary places, ensure a diversity of providers and improve conditions for all childcare institutions. A reformed financing model provides planning certainty and reduces bureaucracy. We strengthen inclusive, reliable lunch and holiday programmes and invest in better working conditions, fair pay and more professional workers.

★ **Modern School Buildings and Sports Facilities**

Page 48

Volt wants schools that enable modern teaching and all-day learning and are well-ventilated, digitally equipped, flexibly usable and designed together with the school community. From 2026 onwards, every school receives its own per-student budget to decide independently on necessary investments. We also build modern sports facilities that are open to sport clubs and residents after school hours – creating places of learning and activity that promote knowledge, confidence and joy.

★ **Supporting Educational Staff**

Page 49

Volt strengthens educational staff through targeted relief and professional support. We introduce external school social work at pilot schools, offer certified training on topics like inclusion and diversity, and establish supervision offers and psychological counselling. Administrative support staff reduce bureaucratic workload, so educators can refocus on their core work.

★ **Strengthening Participation and Democracy in Everyday School Life**

Page 50

Volt promotes a culture of lived democracy in Munich's schools – with strong student parliaments, open parent cafés and low-threshold participation formats. Schools should offer real influence for all students and parents. City-wide programmes such as „Schule der Vielfalt“ and „Demokratie leben!“ are expanded and interconnected so that democratic values become tangible in everyday school life.

★ **Integration Through Education From Day One**

Page 51

Volt ensures that all children have fair educational opportunities from their first day in Munich. A city-wide multilingual “education guide” programme accompanies newly arrived families from childcare to vocational training. Schools receive additional resources for integration and welcome classes, and we support multi-professional teams to enable collective successful learning.

You can find details on the relevant pages in the full german election programme.

Lived Democracy

“Democracy emerges where there is

space for participation and diversity.”

Politics is, at its core, the collective shaping of our shared life. Volt wants to involve residents even more closely in this process, especially at the local level. People know best what is needed in their neighbourhoods. We strengthen civic participation, political education and diversity in society – for a strong, functioning and vibrant democracy.

Our measures include:

★ **Let's Talk – Expanding and Institutionalising Citizens' Assemblies**

Page 53

Volt strengthens democracy by establishing randomly selected citizens' assemblies at both city and district levels. These bodies develop specific recommendations on key policy issues and ensure that Munich's social diversity is represented in political decision-making. This makes participation accessible and impactful for all residents.

★ **Trust Instead of Frustration – Co-Shaping Instead of Complaining**

Page 54

Volt creates new formats for political accessibility in order to rebuild trust in public institutions. Through regular neighbourhood dialogues, digital feedback platforms and dedicated ombudspeople, politics becomes more transparent and responsive. District committees are given more authority and budget so they can make decisions directly on site.

★ **Young Ideas – Giving the Youth a Real Voice**

Page 55

Volt gives young people a meaningful voice in local politics. We introduce youth budgets in schools so young people can implement their own projects. An institutionalized youth council with direct ties to the city council ensures that youth perspectives are systematically considered in all decisions that affect them – from mobility to leisure.

★ **A City That Includes Everyone**

Page 56

Volt removes barriers and creates an administration that serves all residents. With multilingual forms, plain language and welcome desks, the administration becomes more accessible. We anchor anti-discrimination structurally through staff training, a central complaints office and expanded queer-sensitive services so everyone can live safely and self-determined.

★ **Europe Begins in the Neighbourhood – Making the EU Tangible**

Page 57

Volt makes Europe visible and tangible in the everyday lives of Munich's residents. With EU Action Weeks in neighbourhoods, clear labelling of EU-funded projects and European themes in school activities, we highlight the specific benefits the EU brings to our city. Through active involvement in European city networks, we apply proven solutions from across Europe to Munich.

You can find details on the relevant pages in the full german election programme.
